

# How to Block a Website With ZoneAlarm Pro

## Instructions

1.
  - **1**  
Double-click the ZoneAlarm icon in the system tray to open the application.
  - **2**  
Click the "Firewall" link on the left side of the window, then click "Zones" after the menu expands.
  - **3**  
Click the "Add" button in the bottom-right corner of the window, then click "Host/Site." The Add Host/Site window appears.
  - **4**  
Click the "Zone" drop-down menu and select "Blocked."
  - **5**  
Click the "Host Name" field and type the address of the website that you want to block, such as "example.com."
  - **6**  
Type additional information in the Description field to help yourself identify the blocked website if you need to make changes in the future.
  - **7**  
Click the "Lookup" button. ZoneAlarm Pro locates the IP address (es) associated with the website and places them in the text field at the bottom of the window.
  - **8**  
Click "OK."
  - **9**  
Click the "Apply" button, and then close the ZoneAlarm Pro window to resume using the computer.
